

Richter-Helm offers Development and Manufacturing of *Plasmid DNA*

- Establishment and optimisation of host strains
- Manufacturing of cGMP Cell Banks (MCB/WCB)
- Product specific optimisation of the manufacturing process
- Manufacturing of plasmid DNA for preclinical and all clinical applications
- Complete Quality Control Testing
- Well established Quality Assurance system
- Continual regulatory guidance

Richter-Helm's manufacturing process:

High yield
& quality

Fast, robust,
scalable

Completely
closed system

pDNA process

Continuous process,
no subbatches

Free of animal
derived components

No manual
handling steps
